

Massachusetts Disclosure Label

Residential Product Name: GreenValueAssurance6Plus

Electric power suppliers are required by Massachusetts Department of Public Utilities (DPU) to disclose the energy sources to customers. Clearview will report fuel sources and emissions data to customer to compare among the companies providing electricity services in Massachusetts.

Generation Price Average price per kWh at different levels of use. Prices do not include regulated charges for customer service and delivery.	Average Use per Month		250 kWh	500 kWh	1000 kWh	2000 kWh
	Average Price per kWh	National Grid	14¢	12¢	11¢	10.5¢
		NSTAR	12.2¢	10.2¢	9.2¢	8.7¢
Your average generation price will vary according to when and how much electricity you consume. See your most recent bill for your monthly use and your Terms of Service for the actual prices.						

Contract	* Minimum Length: 1 Month * Contract Term: Month-to-month Variable Kilowatt Rate Product
-----------------	---

Power Sources This electricity product was assigned generation from the following sources.	Power Sources		Clearview Energy	
	Biomass	2.00%	Biomass	0%
	Coal	1.60%	Coal	0%
	Hydro	8.40%	Hydro	100%
	Refuse	3.10%	Refuse	0%
	Municipal	1.10%	Municipal	0%
	Natural Gas	37.70%	Natural Gas	0%
	Nuclear	30.80%	Nuclear	0%
	Oil	0.7	Oil	0%
	Other Renewables	4.90%	Other Renewables	0%
	Solar	2.20%	Solar	0%
	Wind	3.10%	Wind	0%
	Total	100%	Total	100%

Air Emissions Carbon dioxide (CO ₂), nitrogen oxide (NO _x), and sulfur dioxide (SO ₂) emission rates from these sources, relative to the regional average.	<div style="border: 1px solid black; padding: 10px;"> <p style="text-align: center;">Clearview Energy Air Emissions</p> <table style="width: 100%; border-collapse: collapse;"> <tr> <td style="width: 15%; vertical-align: top;">CO₂</td> <td style="width: 70%;"></td> <td style="width: 15%;"></td> </tr> <tr> <td style="vertical-align: top;">NO_x</td> <td style="border-left: 1px dashed black;"></td> <td></td> </tr> <tr> <td style="vertical-align: top;">SO₂</td> <td style="border-left: 1px dashed black;"></td> <td></td> </tr> <tr> <td></td> <td style="text-align: center;">Lower Emissions</td> <td style="text-align: center;">Higher Emissions</td> </tr> </table> </div>	CO ₂			NO _x			SO ₂				Lower Emissions	Higher Emissions
CO ₂													
NO _x													
SO ₂													
	Lower Emissions	Higher Emissions											

Notes

- The power source and air emissions information is based on a 12-month period ending December 31, 2017
- See reverse side and your contract terms and conditions for further information on this label. You may also call Clearview Energy at 1-800-746-4702, or the Massachusetts Utility Commission at 1-877-886-5066.
- 76% of the electricity from System Power came from power sources with union contracts with their employees

LABEL DESCRIPTION

Generation Price and Contract: Generation Prices displayed are representative average prices for electricity at usage levels that are typical for residential customers. Contract items displayed present the length of your contract for generation service, and the price terms included in your contract. See your recent bill to determine average monthly use, and your Terms of Service for additional information.

Power Sources: The actual electricity you use will be indistinguishable from the electricity used by your friends and neighbors. This is unavoidable because everyone is served through the same transmission and distribution system. The power sources label cannot tell you about the electricity that you use in your home; instead, it tells you that your dollars are going to pay for particular power plants. Since it is impossible to track the flow of electricity on the grid, there is no way to identify the actual power plant that produced the electricity you consume in your home. But it is possible to track the dollars you pay for electricity. Your electricity dollars will support electricity generation from various energy resources in the proportions listed on the power content label.

Emissions: Emissions for each the following pollutants are presented as a percent of the regional average emission rate.

Carbon Dioxide (CO₂) is released when certain fuels are burned. It is considered a greenhouse gas and a major contributor to global warming.

Nitrogen Oxides (NO_x) form when certain fuels are burned at high temperatures. They are considered contributors to acid rain and ground-level ozone (or smog).

Sulfur Dioxide (SO₂) is formed when fuels containing sulfur are burned. Major health effects associated with SO₂ include asthma, respiratory illness and aggravation of existing cardiovascular disease.

The production of electricity can produce other harmful emissions and have other environmental impacts. Environmental impacts differ among individual power plan.
